- Building web application with ASP.NET MVC , web forms, HTML, Jquery, CSS , Javascript.

SKILLS

- Team work
- powerpoint
- C#
- Algorithms
- Database
- Data Structure
- Communication

- Microsoft excel
- Agile
- DevOps
- Autocad
- Problem Solving
- Leadership
- Time Management
- User interface
- User experience
- Word press
- Html
- Css
- Java script
- React js
- Angular
- Vue.js
- User interface
- User Experience
- Figma
- Thunkable

CERTIFICATES

- Getting started with Git and Github.Obtained March 2024, From coursera.
- Developing websites and frontends with bootstrap.Obtained Febreuary 2024 From coursera.
- Introduction to HTML,CSS &JavaScript. Obtained febreuary 2024 From coursera.

- Designing User interfaces and experiences (UI/UX). Obtained January,2024 From coursera

- Getting started with front-end and web development . Obtained January,2024 From coursera.

- Introduction to DevOps . Obtained November, 2023 From coursera.

PROJECTS

- Jordan Way System. Associated by AL-Balqa Applied University.
  The Jordan system way is an easy-to-use electronic system that includes farm owners, hotel owners, and users of the system.
  one of the notable features of the system is its focus on finding and booking farms

and hotels in one system. Users can reserve farms or restaurants at any time through the system, ensuring compatibility. user with their specific requirements.

The system provides a service to provide the opportunity for the owners of farms and hotels to create an account within the system and publish their farms. The customer also creates an account and reserves the farm or hotel to be reserved, which appears to the owner of the concerned reservation that he has booked on a specific date and confirms the reservation to the owner of the farm or hotel that has been booked.

.
